

Based on market demand, **LO&T** has developed the Vibromatic® L18.

This automatic de-winder can be placed as a 'stand alone' unit upstream of a vision system to spread medication that is packed in pouches before the pouches pass through the vision system. This reduces the number of false negatives during pouch inspection substantially. Hence, it results in a significant cost reduction.

The Vibromatic® L18 uses a patented spreading system. The Vibromatic® L18 is already being used by several pharmacies in the Netherlands, Belgium and Switzerland.

Important features:

- Significantly lower percentage (up to 50% lower) of False Negatives
- No damage of the medication, thanks to the special, patented, spreading system
- Automatic de-winding; prevents foil rupture in the medication roll
- Easy to position upstream of a vision machine
- Simple operation
